

## Project Data Sheet

# CASS SCULPTURE FOUNDATION

**“Cephalopod” by Eilís O’Connell**  
Commissioned by CASS sculpture Foundation

Structural internal framing and support for sculpture exhibition.

Euro-Tel Design LTD provides Structural design and detailing, and Structural advisory services.

Since its establishment in 1992, the CASS Sculpture Foundation has annually commissioned 20 exemplary monumental sculptures from emerging and established contemporary sculptors.

In 2008 this charity commissioned a sculpture by Eilís O’Connell, and Euro-Tel Design LTD was called in to provide bespoke structural design for the supporting steelwork.

A ‘maquette’ or small scale model was produced, and ETD undertook a full 3D laser scan of this article, upscaling it to its full 12m x 6m footprint, in order to provide calculations and design the internal supporting steelwork.

The construction is a composite – marine foam and GRP with gel coat, and has been designed for external exhibition.
